

CORPORATE AND WINTER OPERATIONS SERVICES PROFILE

The requirement for reengineering of public sector business processes has resulted in a rapid rate of change and more complex information dependant operations for our transportation sector clients. The ability of organizations to be able to react to change and opportunities is fundamental to their survival and required for growth

Mark F. Pinet & Associates Limited is a Consulting Engineering firm specializing in development, deployment and administration of solutions that facilitate the cost-effective implementation, management and operation of our client's facilities. Mark F. Pinet & Associates was formed in 1995 and its owner and president, Mark Pinet, P.Eng. has been providing services to private and public sector clients in the consulting engineering field for over 25 years.

We have developed a track record for turning around projects in record time (in months-not years) and in some instances for deploying systems for the costs, which had originally been budgeted for only the study. We are able to meet and overcome the challenges of today's public sector financial constraints and do so with a minimal time commitment from the client's staff.

The challenges currently facing maintenance service providers include efficient and effective use of deicing chemicals to maintain a level of service while reducing operating costs and minimizing impacts on the environment.

Mark F. Pinet & Associates Limited has responded with SALT SOLUTION™. Our approach begins with our salt audit and ultimately results in a customized operations plan which enables our clients to attack winter's worst weather head on and come out on top.

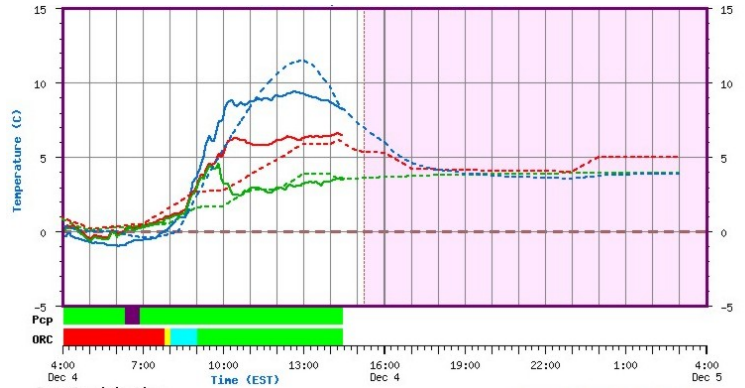

Our services have included a full range of applications including Automated Spreader controls for prewetting, infrared temperature sensing, RWIS, pavement condition forecasting and FAST automated antiicing. Our ITS enterprise architecture solution maximizes the value of your investments by ensuring that the information can be made available to all those users who may benefit from it opening the doors for information exchange cooperatives.

Mark F. Pinet & Associates Limited

Our answers are scalable to suite most budgets and include:

- Salt management reviews
- Remote condition sensing and internet reporting
- Pavement condition Forecasting
- Network forecasting
- Beat routing and optimization
- Automated call out
- Prewetting implementation
- Antiicing
- Snow disposal
- Maintenance Standards Development
- Automated Vehicle Locating
- On board Infrared temperature sensing
- Thermal Mapping
- Information Management Systems
- Decision support systems

We will carry your organization through the full deployment providing

- Project management
- Needs analysis
- Study
- Design
- Procurement assistance
- Installation
- Warranty
- Performance monitoring
- System Administration
- Turnkey system installation
- Operation
- Training
